

GOPI M

Java Backend / Full Stack Developer

Phone: +91 96554 22045 Email: mr.gopi0004@gmail.com GitHub: Gopi-Dev-004 LinkedIn: gopi-m-java-dev
Portfolio: gopi004-portfolio.vercel.app

Summary

Java Backend Developer with 6 months of practical experience delivering 60+ REST APIs using Spring Boot and MySQL. Expertise in MVC architecture, JWT authentication, database design, and transaction management. Successfully led team projects implementing complex business logic with proper exception handling and ACID compliance. Seeking to leverage backend development skills in building scalable, high-performance applications.

Technical Skills

- **Programming:** Core Java, Java 8 (OOP, Collections, Stream API), Exception Handling
- **Frontend:** HTML5, CSS3, JavaScript, React (Basic)
- **Backend:** Servlet, JDBC, Spring Core, Spring Boot, Hibernate (ORM), REST APIs
- **Database:** MySQL, SQL, ACID Properties
- **Security & Web:** JWT Authentication (Basic), Session & Cookies, JSON, Swagger API
- **Tools & DevOps:** Maven, Tomcat, Postman, Git, GitHub, CI/CD (Basics), SDLC, Agile
- **Testing & Architecture:** JUnit, Mockito, MVC Architecture, Microservices (Basic), Troubleshooting

Internship Experience

Full Stack Developer Intern

Jul 2025 – Jan 2026

Uniq Technologies

- Completed comprehensive training in **Java/Java 8+** (Lambda, Stream API, Collections, Multithreading), **Spring Boot**, **Spring Security**, **Hibernate ORM**, and **MySQL database design** with hands-on project development
- Developed production-ready **RESTful APIs** using **Spring Boot** with MVC architecture, implementing DTO pattern, JWT authentication, centralized exception handling, pagination, and transaction management
- Designed normalized **MySQL databases** with constraints, stored procedures, triggers, and complex queries (joins, subqueries) ensuring ACID compliance and query optimization
- Worked with **Spring Data JPA and Hibernate** implementing entity associations, lazy/eager loading, and custom repository queries with proper transaction rollback handling
- Utilized **Postman** for API testing, **Git/GitHub** for version control, **Maven** for build automation, and followed Agile practices with code reviews and sprint planning

Projects

Car Insurance Management System (Self-Designed Backend Project)[Link] Dec 2025 – Feb 2026

- Architected and developed a comprehensive insurance backend system with **45+ REST API endpoints** across 6 controller modules (Admin, Policy, Claim, Car CRUD, Authentication) using **Java** and **Spring Boot**
- Designed normalized **MySQL database with 15+ interconnected entities** including Customer, Vehicle, Policy, Claims, Payments, and Addons with proper foreign key relationships and indexing
- Implemented **multi-role authentication system with JWT tokens** supporting 3 user roles (Admin, Employee, Customer) with role-based access control and session management
- Built **dynamic premium calculation engine** that computes policy pricing based on vehicle age depreciation (0-100%), addon selections, policy duration, and IDV values with real-time quote generation
- Developed complete **claim management workflow** with multipart file upload support, employee specialization routing (6 claim types: Accidental Damage, Theft, Fire, etc.), and status tracking
- Applied **layered MVC architecture** (Controller → Service → Repository) with custom exception handling, DTO pattern for validation, and pagination support across all list endpoints

- Collaborated with a 3-member team as **Team Lead** to develop a full-stack banking application with **15+ REST API endpoints** across 4 controller modules (Admin, Account, Transaction, User) using **Java and Spring Boot**
- Led backend architecture design implementing **MVC pattern** with Controller → Service → Repository layers and established code review standards for team consistency
- Independently developed **complete Transaction Management module** with pagination support, handling deposit/withdrawal/transfer operations with ACID compliance and real-time balance updates
- Implemented **centralized global exception handling** using @ControllerAdvice with custom error responses for validation failures, insufficient balance, and account status checks
- Designed **MySQL database schema with 4 core tables** (User, Account, Transaction, Role) featuring proper foreign key constraints and transaction history tracking
- Built responsive **React frontend** integrated with backend APIs featuring real-time balance display, transaction history with filters, and form validations
- Delivered features including role-based authentication (Admin/User), account creation with auto-generated account numbers, fund transfers with validation, and comprehensive admin dashboard showing bank statistics

Education

Sri Vidya Mandir Arts and Science College, Uthangarai

Oct 2022 – Apr 2025

B.Sc Computer Science — CGPA: 7.8 / 10

Certifications

ReactJS Workshop (2024), SAIT’24 IT Symposium (2024), Typing – First Class with Distinction (2025)

Soft Skills

Logical thinking, Communication, Teamwork, Problem Solving, Adaptability, Self-Learning
